LEXINGTON SINGLE REGISTER FURNACE

An exclusive feature of the Lexington is our Double Lap Joint (NOT FOUND IN ANY OTHER FURNACE). This is clearly shown in the accompanying illustration. Wherever one part is joined to another, the grooves are filled with a asbestos cement, then the projecting rim on the upper casting is firmly set in the groove on the lower, and this makes a joint that cannot warp or pull away and one that will remain and gas tight during the entire life of the furnace.
